

Greening Partnership Program for Natural Habitat Restoration Projects Covers up to 75% Costs

The Lower Thames Valley Conservation Authority administers a Greening Partnership program for Natural Restoration projects. Up to 75% of costs may be covered. Benefits include salt and noise buffer, increased microclimate for advanced yield on fields, improved water infiltration and erosion control, improved air quality, and heating and cooling energy savings. Species selected will be determined by salt tolerance and soil type. The project will be administered by Conservation Services staff. To participate in this exclusive program, or get information on any of our Greening Partnership programs contact us.
